

Assignment 2

4. What problems do you encounter when dealing with the dataset?

While I was able to use the library(haven) process I could not get the frequency table to function the way I wanted to. There was constant checked and rechecks that had to be put into place, else the code would not act probably.

5. How to deal with missing values?

I do not know if there is a way to deal with the missing variables beyond acknowledging them as missing parts of the outcome. I had to go back multiple times and even restart the program in order for it to get close to functional.

6. Explore the relationship between Tondu and other variables including female, DPP, age, income, edu, Taiwanese and Econ_worse. What methods would you use?

I used the run process. I tried to see if I could get it to fit within a plot or graph however this also proved to be challenging as there is no clear indication on the plot function, rather I had to type out the function through its raw data.

7. How about the votetsai variable (vote for DPP candidate Tsai Ing-wen)?

Unused.
